

WARNING

**Don't Even Think About
Purchasing a Laser Tag System
Until You Read This...**

This report is brought to you by...

**When it comes to laser tag the choice is
LaZer Runner...**

**Number one in systems sold for
*12 consecutive years!***

You Gotta See This...

Recently the DISCOVERY CHANNEL produced a segment on laser tag. More specifically, the segment clearly showed something very important...

You should NEVER consider purchasing an infra-red (IR) laser tag system.

At LaZer Runner, we've been saying the very same thing for years! Infra-red laser tag systems are very inaccurate and fraught with numerous problems. I go into all the problems and maintenance headaches of infra-red systems in my report entitled...

***“The One Big Problem
With Most Laser Tag Systems
And How To Avoid It Entirely”***

The DISCOVERY CHANNEL's television program demonstrated exactly why our radio-frequency (RF) laser tag system with fiber-optic technology and Laser Data Transmission (iLDT) *is the only way to go!*

Just before I tell you how to see this TV segment, let me tell you a bit about it...

The DISCOVERY CHANNEL used the services of Mark Ontell (I may not have the spelling of his name correct). Mark is a physicist who is employed at an electronics research and development firm. He is very familiar with the subject of laser tag and infrared (IR) technology. As he performs several tests to show just how lousy an IR laser tag system performs, he uses terms like these...

- Not that precise
- Loosy-goosy (I love this term)
- Useless
- Not even close

Test after test shows the IR equipment failing miserably during use. The brand of IR equipment is irrelevant. Although the phasers and vests of various IR laser tag manufacturers may look different, all IR equipment is basically the same. It's inferior. It's all unreliable. It all requires a ton of maintenance every day. It's a huge headache to own and operate IR laser tag equipment.

Avoid it like the plague.

Listen...

LaZer Runner is the only laser tag system that uses intelligent Laser Data Transmission (i-LDT) and fiber-optic technology to consider if durability, reliability and low maintenance are important to you. We are also the largest laser tag manufacturer in the world. Operators love our durability, reliability and low maintenance!

But don't take my word for it...

Click on the link below and see what the DISCOVERY CHANNEL had to say about the unreliable and maintenance-prone infra-red system. It may take a bit of time to download but it's definitely worth it. (If you have a dial-up connection it may take some time to download).

Sincerely,

A handwritten signature in cursive script that reads "Kenn Schurek". The signature is written in black ink and has a long, sweeping underline that extends to the right.

Kenn Schurek – Founder
LaZer Runner Laser Tag Systems

PS The DISCOVERY CHANNEL segment has put many of the infra-red laser tag manufacturers into "*damage control mode*". The facts are clear, LaZer Runner with intelligent Laser Data Transmission has made all old style infrared systems OBSOLETE.
